Nanos Methodology

CTV News/Globe/Nanos Poll Questions

AM Release – Ballot and Vote Driver

1. If a FEDERAL election were held today, could you please rank your top two current local voting preferences? (committed voters only – first preference)
2. Which of the following factors are most important to you today in influencing your vote? [ROTATE]

PM Release – Top Issue and Leadership Index

3. What is your most important NATIONAL issue of concern? [Unprompted]

As you may know, [ROTATE all five federal leaders with name and party]. Which of the federal leaders would you best describe as:

4. The most trustworthy
5. The most competent
6. Has the best vision for Canada's future

Methodology

A national random telephone survey is conducted nightly by Nanos Research throughout the campaign. Each evening a new group of 400 eligible voters are interviewed. The daily tracking figures are based on a three-day rolling sample comprised of 1,200 interviews. To update the tracking a new day of interviewing is added and the oldest day dropped. The margin of error for a survey of 1,200 respondents is $\pm 2.8\%$, 19 times out of 20.

The respondent sample is stratified geographically and by gender. The data may be weighted by age according to data from the 2006 Canadian Census administered by Statistics Canada. Percentages reported may not add up to 100 due to rounding. The research has been registered with the Marketing Research and Intelligence Association of which Nanos is a member.

Leadership Index Score Methodology

Every day, Nanos will report on a daily leadership index score. The leadership index score is a summation of the three leadership indicators (trust, competence, vision). For example, on March 15th (M15), Elizabeth May received a Leadership Index Score of 11.6 because 4.3% of Canadians identified Elizabeth May as the most trustworthy leader, 3.4% said she was the most competent and 3.9% said she had the best vision for Canada.

The Leadership Index score will be tracked daily with updated results from the previous night of polling. Unlike the other measures tracked by Nanos, the leadership index score will not be based on a three-day rolling sample. It will be reported from results from the evening before. This will allow Nanos to measure the performance of the federal party leaders and the key factors driving performance on a daily basis.
